If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Earliest Priority Filing Date: _____

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

Multi-layer forming fabric with stitching yarn pairs integrated into papermaking surface

REISSUE: October 18, 2001 - Reissue Application filed Ex. Gp.: 3741; Re. S.N. 09/982,917 (O.G. October 8, 2002)

APPL-NO: 905130 (08)

FILED-DATE: August 1, 1997

GRANTED-DATE: October 19, 1999

LEGAL-REP: Myers Bigel Sibley & Sajovec

CORE TERMS: yarn, stitching, fabric, machine, fiber, knuckle, layer, binding, papermaking, interwoven ...

ENGLISH-ABST:

A multi-layer papermaker's forming fabric has stitching yarns integrated into the papermaking surface. Each of a plurality of repeating units of the fabric comprises: a set of top machine direction yarns; a set of top cross-machine direction yarns interwoven with the top machine direction yarns; a set of bottom machine direction yarns; a set of bottom cross-machine direction yarns interwoven with the bottom machine direction yarns; and pairs of first and second stitching yarns. The stitching yarn pairs are positioned between pairs of top cross-machine direction yarns. The stitching yarns of each pair are interwoven with the top and bottom machine direction yarns such that, as a fiber support portion of the first stitching yarn is interweaving with the top machine direction yarns, a binding portion of the second stitching yarn is positioned below the top machine direction yarns, and such that as a fiber support portion of the second stitching yarn is interweaving with the top machine direction yarns, a binding portion of the first stitching yarn is positioned below the top machine direction yarns. The first and second stitching yarns cross each other as they pass below a transitional top machine direction yarn. Also, each of the binding portions of the first and second stitching yarns passes below at least one of the bottom machine direction yarns. In this configuration, the stitching yarns are completely integrated into the top, or papermaking, surface of the fabric, and therefore do not adversely impact the papermaking qualities of the fabric.

AB - A multi-layer papermaker's forming fabric has stitching yarns
integrated into the papermaking surface. Each of a plurality of
repeating units of the fabric comprises: a set of top machine
direction yarns; a set of top cross-machine direction yarns
interwoven with the top machine direction yarns; a set of bottom
machine direction yarns; a set of bottom cross-machine direction
yarns interwoven with the bottom machine direction yarns; and
pairs of first and second stitching yarns. The stitching yarn
pairs are positioned between pairs of top cross-machine direction
yarns. The stitching yarns of each pair are interwoven with the
top and bottom machine direction yarns such that, as a fiber
support portion of the first stitching yarn is interweaving with
the top machine direction yarns, a binding portion of the second
stitching yarn is positioned below the top machine direction
yarns, and such that as a fiber support portion of the second
stitching yarn is interweaving with the top machine direction
yarns, a binding portion of the first stitching yarn is positioned
below the top machine direction yarns. The first and second
stitching yarns cross each other as they pass below a transitional
top machine direction yarn. Also, each of the binding portions of
the first and second stitching yarns passes below at least one of
the bottom machine direction yarns. In this configuration, the
stitching yarns are completely integrated into the top, or
papermaking, surface of the fabric, and therefore do not adversely
impact the papermaking qualities of the fabric.
